Safe harbor

This presentation contains "forward-looking statements" within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995, including but not limited to, statements regarding our financial outlook, business strategy and plans, market trends and market size, opportunities and positioning. These forward-looking statements are based on current expectations, estimates, forecasts and projections. Words such as "expect," "anticipate," "should," "believe," "hope," "target," "project," "goals," "estimate," "potential," "predict," "may," "will," "might," "could," "intend," "shall" and variations of these terms and similar expressions are intended to identify these forward-looking statements, although not all forward-looking statements contain these identifying words. Forward-looking statements are subject to a number of risks and uncertainties, many of which involve factors or circumstances that are beyond our control. For example, global economic conditions have in the past and could in the future reduce demand for our products; we and our third-party service providers have in the past and could in the future experience cybersecurity incidents; we may be unable to manage or sustain the level of growth that our business has experienced in prior periods; our financial resources may not be sufficient to maintain or improve our competitive position; we may be unable to attract new customers, or retain or sell additional products to existing customers; customer growth has slowed in recent periods and could continue to decelerate in the future; we could experience interruptions or performance problems associated with our technology, including a service outage; we and our third-party service providers have failed, or were perceived as having failed, to fully comply with various privacy and security provisions to which we are subject, and similar incidents could occur in the future; we may not achieve expected synergies and efficiencies of operations from recent acquisitions or business combinations, and we may not be able to successfully integrate the companies we acquire; and we may not be able to pay off our convertible senior notes when due. Further information on potential factors that could affect our financial results is included in our most recent Quarterly Report on Form 10-Q and our other filings with the Securities and Exchange Commission. The forward-looking statements included in this presentation represent our views only as of the date of this presentation and we assume no obligation and do not intend to update these forward-looking statements.

Any products, features, functionalities, certifications, authorizations, or attestations referenced in this presentation that are not currently generally available or have not yet been obtained or are not currently maintained may not be delivered or obtained on time or at all. Product roadmaps do not represent a commitment, obligation or promise to deliver any product, feature, functionality, certification or attestation and you should not rely on them to make your purchase decisions.

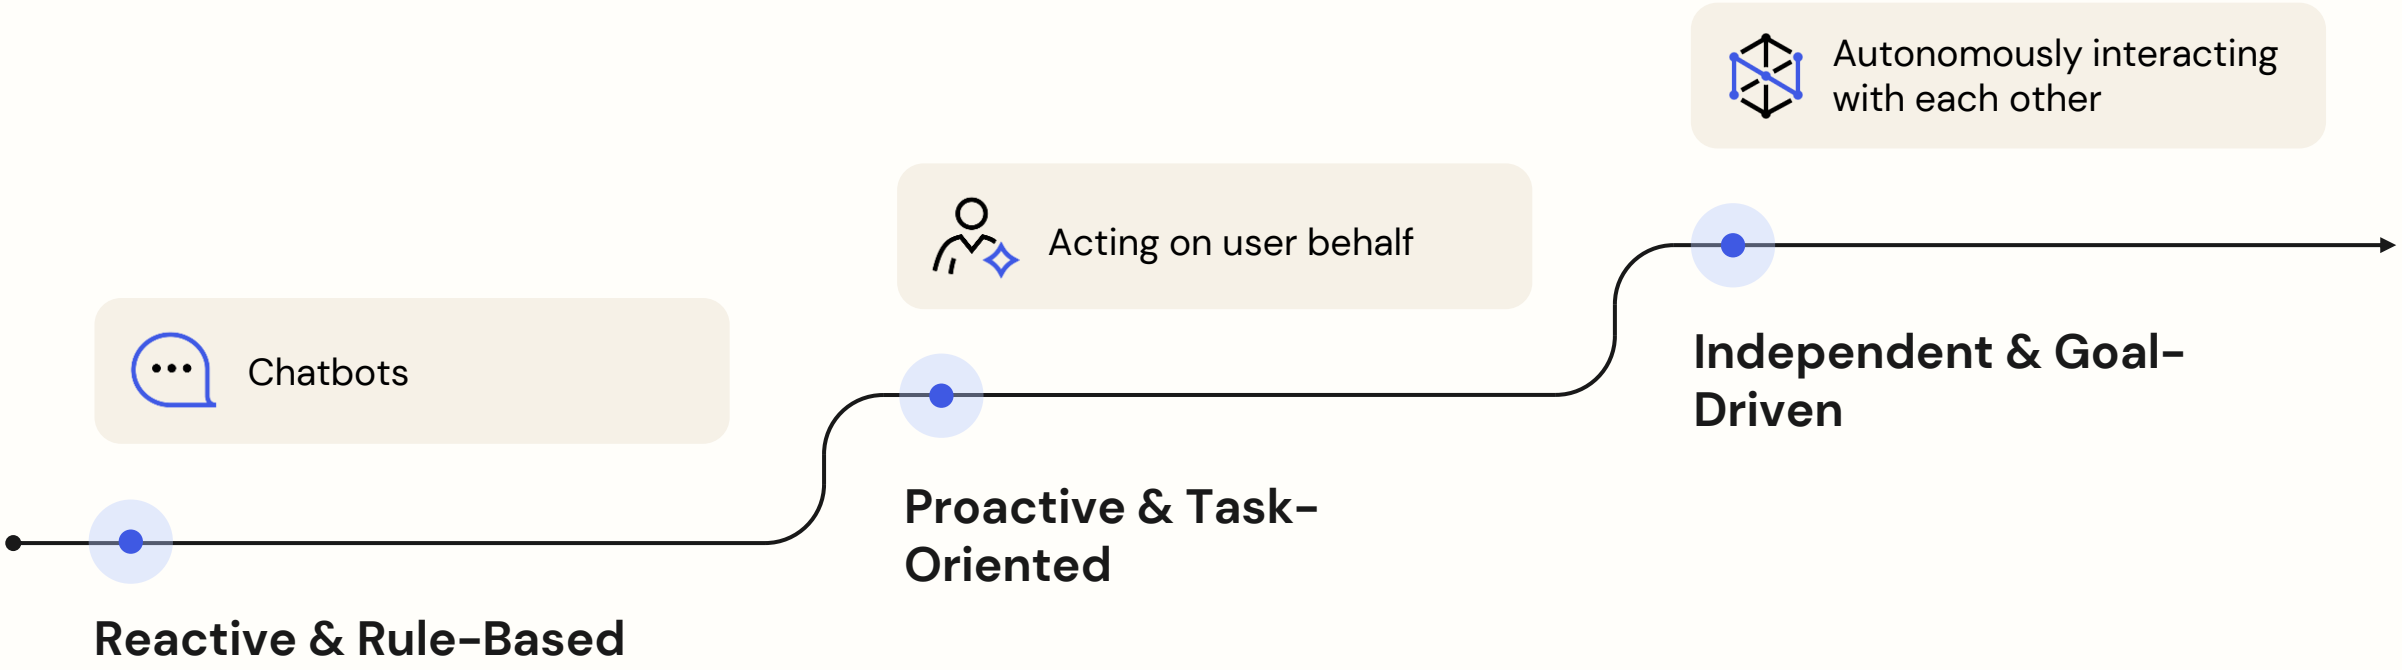
AI Agents are rapidly evolving, becoming more complex and introducing new risks



© Okta, Inc. and/or its affiliates. All rights reserved.

AI adoption is surging. Security and governance haven't kept up.

91% of organizations are already using AI agents [1]

80% experienced unintended agent behavior [2]

23% report credential exposure via agents [3]

44% have no governance in place [4]

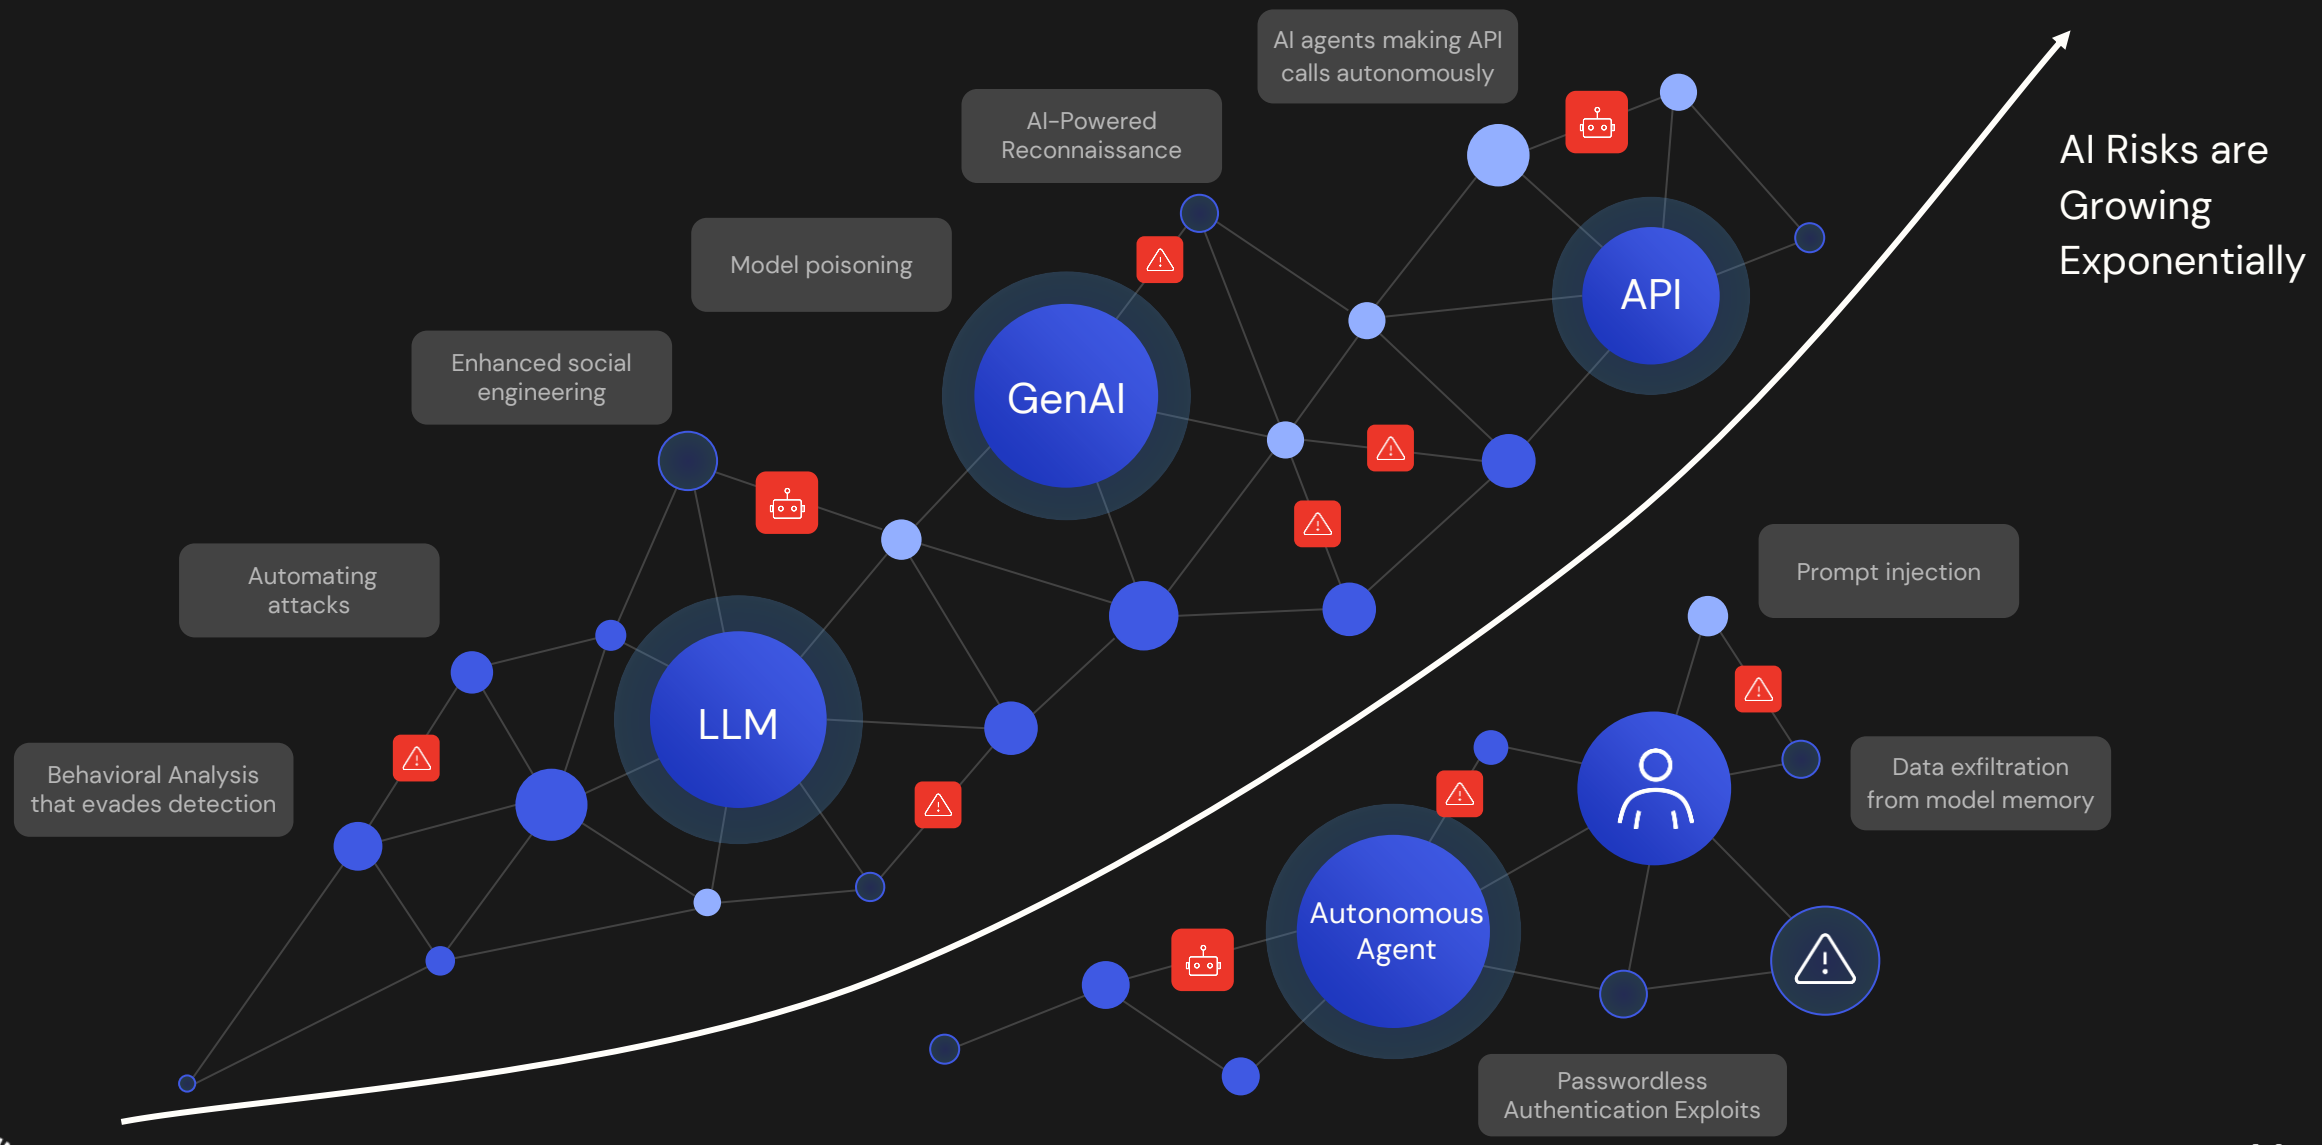
okta

AI is rewriting the attack surface



© Okta, Inc. and/or its affiliates. All rights reserved.

Agentic AI introduces major identity security risks

Unauthorized data access

Agents fetch data the user should never see.

Stale or over-provisioned permissions

Old roles or tokens can let agents with powers nobody tracks.

Compliance & audit gaps

Actions are not tied back to a real user or logged consent, so audits fail.

Weak or coarse-grained authorization

One-size rules let any agent run sensitive actions.

Secrets & credential leakage

Keys and tokens can show up in prompts where attackers can steal them.

Privacy & data-leak exposure

Personal data leaves safe zones and can land in the wrong hands.

OKTA PRODUCT DESIGN

Help shape the future of Okta: Share your perspective on securing AI

Be part of the conversation and help us understand what you need to secure AI at your company. Provide feedback on design concepts, share your experience with the beta or EA, and explain your current use cases and needs. No wrong answers, just insight from you, our customers!

During this hour, you'll meet with our UX and design teams to discuss your most critical needs, gaps in your current toolsets, and what you'd like to see next from Okta so we can build a more powerful and intuitive solution to secure AI.

Okta for AI Agents

Build and manage AI agents securely

Secure 'every' agent

Generally Available Today

Build agents to be secure-by-design

- Token Vault
- Fine-Grained Authorization
- Out-of-the-box support for Cross App Access
- Authentication for AI agents
- Async Auth

Secure 'all' agents

Available in Early Access Today

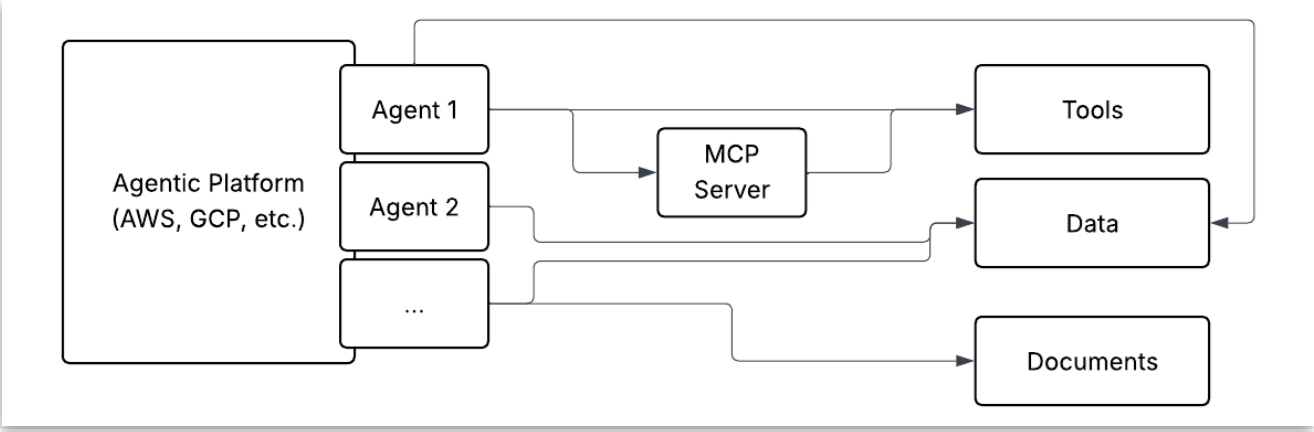
Manage and govern AI agents in your environment

- Agent registry in Universal Directory
- Agent detection with Identity Security Posture Management
- Agent governance and access certification with Okta Identity Governance
- Privileged account credential vaulting for agents with Okta Privileged Access
- Universal logout for agents

Thank you!

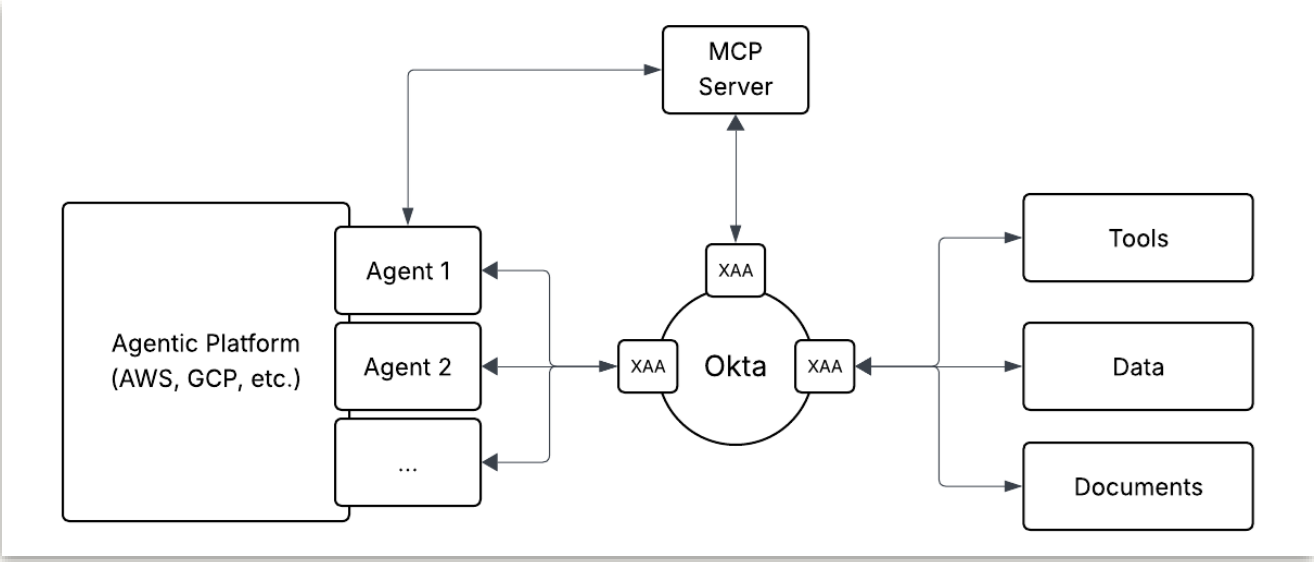
© Okta, Inc. and/or its affiliates. All rights reserved.

DATA CLASSIFICATION: OKTA, INC. PUBLIC



✗ *Without Okta - dependent on agentic platform*

- **Direct connections** between agents/MCPs and enterprise resources → major risk
- **No single registry, governance and threat detection** → leads to sprawl, and cost overruns
- **Dependence on agentic platform for IAM** → vendor risk, breaks layered defense strategy



✓ *With Okta for AI Agents - central control plane*

- **All connections managed through Okta**, based on industry protocol of Cross App Access (XAA) → full access control in IT/Security's hands
- **Agentic control plane** → visibility, control and lifecycle governance
- **Built-in threat detection and response** → universal logout for agents
- **Central enforcement of IAM policies on agents**

Complete AI Security Stack: Discover, Onboard, Protect

Gateway-Centric Architecture: Okta discovers & registers → AI Gateway protects runtime access

Any AI Agent

- LLM Assistants
  Claude, ChatGPT, Gemini
- Platform Agents
  Copilot, Agentforce, Bedrock
- Purpose-Built
  Sierra, Devin, Glean
- Custom
  Internal builds

→ IdP Token (Auth0, Okta, other IdP) →

1. DISCOVER
Agent Discovery

- Known agent platforms
  (Bedrock, Agentforce, Copilot, GCP)
- Shadow unsanctioned
  (browser ext, network detection)
- Service accounts & NHIs
  (API keys) in SaaS apps
- Tag risk score
  (access breadth/depth)

→

2. ONBOARD & CONFIGURE
Agent Registry + Lifecycle

- Register in
  Universal Directory
- Assign owners
  (individuals or groups)
- Governance
  (access certification)
- Lifecycle: onboard,
  certify, offboard

→

3. PROTECT
AI Security Gateway

- Token Vault
  Never expose tokens
- Token Exchange
  IdP → resource
- FGA / OPA
  Fine-grained authz
- CIBA
  Human-in-loop
- Universal Logout
  Instant revoke
- Telemetry
  Logs to SIEM

→ Resource Token →

Any Resource

- External SaaS
  Salesforce, ServiceNow
- External MCP
  Atlassian, public MCP
- Internal MCP
  Enterprise MCP servers
- Internal APIs
  REST, GraphQL
- Other Agents
  Agent-to-Agent (A2A)

↺ Continuous Discovery: Scan for new shadow agents and feed back to Registry

How It Works

Discover: Scan agentic platforms (Bedrock, Agentforce, Copilot, GCP), detect shadow agents via browser/network, find NHIs in SaaS apps

Onboard: Register agents in Universal Directory with owners, risk scores, and metadata. Automate lifecycle with Workflows.

Protect: Gateway brokers all access. Token Vault holds credentials. FGA enforces fine-grained authz. CIBA for sensitive ops. Logs to SIEM.

Key: Discovery finds agents → Registry onboards them → Gateway protects runtime access. Discovery runs continuously to catch new shadow agents.

Okta for AI Agents - Roadmap

We have an aggressive roadmap over the next many *months* (not years) to help our customers build and manage agents securely

Available now

For agent builders

- Token vaulting for agents
- Human-in-the-loop flows
- Fine-grained authorization
- All of the above for MCP

For IT/Security

- Agent registry (universal directory, ownership and connections)
- NHI registry
- ISPM for humans and NHI

Early 26

For agent builders

- Partner dev portal
- Deeper agentic/payment platform integrations (e.g. AWS, OpenAI, Google, etc.)

For IT/Security

- Agent detection in ISPM (browser plugin & native app)
- Access certifications for agents
- Agentic access relay

Later in '26

- Deeper integrations into security stack
- Agentic access relay enhancements - signal sharing, token revocation
- Continued agentic platform integrations

Ongoing work to increase standards adoption

- Cross-app access support for requesting and resource apps
- Continued push to get ISVs to adopt XAA

RISK REMEDIATION GUIDE

Configure Cross App Access

Get step-by-step instructions to configure connections using Cross App Access or Service Accounts.

The following admin roles have permission to complete this guide:

Super Admins

1. **Create a Connection to App/Agent**

From the Managed Connections tab, on the AI Agent, click the **Create Connections** button. In the Connection page:

- Select the app or agent to which you'd like to allow a connection.
- Select either Service Account, Vaulted Secret or Cross App Access, as the **Access mechanism**.
- Select the **Scopes** allowed for this connection.
- Click the **Add resource** button.
- Repeat this process for any additional connections.

What happens next

The AI Agent is now allows to make connections to the apps/agents configured above.

Next Steps:

okta

Secure your agents today and tomorrow using a maturity model

01 Fundamental

Authorize and Protect AI Agents

Build a secure foundation by **creating policies** and **coverage** for AI agents

02 Advanced

Discover and Detect Risk

Strengthen your oversight by identifying critical artifacts and agent patterns, pinpointing existing errors and also providing clear remediation for risk

03 Scale

Provision and Register AI agent Access

Enhance your security posture by **defining both agent and human roles**. Import **static credentials** to fortify protection

04 Strategic

Govern and Monitor Agentic AI Behavior

Ensure **continuous security** and **compliance** by establishing regular access certificates and comprehensive reporting on agent-based action
